

STATINTL

21 June 1960

MEMORANDUM FOR:

SUBJECT :

STATINTL

1. [REDACTED] was given code-word clearance and briefing on Monday, 13 June 1960. He is now the only person working on the contract with full technical information, other than PIC personnel.

STATINTL

2. During the week, he was briefed on film formats of all taking systems in use and was shown selected areas of cover. He spent some time with [REDACTED] and PIs in his area; also time with [REDACTED] on collateral briefing. The various briefings clarified several obscure points for [REDACTED] and should help considerably in his study.

3. [REDACTED] returned to Los Angeles on Friday, 17 June, and gave me to understand that Rock of Broadview would be continuing with the study in D. C.

STATINTL

4. Most of the equipment he required is now installed in [REDACTED] building and is in use.

STATINTL

5. I have indicated to [REDACTED] that he should not be biased towards designing the group viewing unit around the particular formats and quality of these formats now in use. It would seem to me, that to be of future use, he will still have to use his imagination and not use present methods in terms of time, quality and format as his only basis for design. I think he appreciates this after this last week and it has altered his approach somewhat to the study.

STATINTL

6. The study has now been in progress (at [REDACTED] building) since 15 March, approximately 3 months, and has consisted mainly of briefings by PIC personnel. [REDACTED] points out that completion is called for six months from his full clearance. This means that completion should be somewhere around the end of October. However I hope that there will be something in the way of breadboard equipment ready before that date. The [REDACTED] rear projector system and the [REDACTED] projector system should be available in [REDACTED] building late June or early July.

7. Cover of the D. C./Baltimore area was flown [REDACTED] to provide target material (unclassified) for the study. This will be treated by [REDACTED] as though it were an incoming mission in order to evaluate presentation for scanning, plotting, 1st phase (Ode) type reporting and detailed reporting.
